FICTIONAL DEMONSTRATION • NS-2026-014

Exhibit C — Inspection report

2026-10-17

Exhibit C — Northstar inspection report NS-2026-014. Northstar's technician tested all 60 Meridian M14 laptops on 17 October 2026. Twelve devices shut down within 30 minutes, and a different six devices could not charge. Eighteen distinct devices failed and 42 passed the test. All 60 devices matched the ordered RAM and SSD specifications. The report includes device serial numbers in a separate attachment that has not been supplied. The technician found no visible liquid damage but did not disassemble the devices. The report records symptoms, not a proven root cause. Repair cost and latent defects in the other 42 devices are not established. This document is fictional.
